Detoxing from Amphetamines

In general, amphetamine addiction can result in withdrawals that appear mostly as anxiety,

hypersomnolence, depression, flat-affect, hallucinations, and delusions, among other symptoms. In that case, it's important that those addicted to these drugs receive professional detoxification assistance to prevent a return to amphetamine use and to ensure successful maintenance of sobriety. Also, it's vital that those struggling with addiction to these substances get the treatment they need through innovative therapy and relapse prevention strategies. Then, they can go on to live healthier lifestyles which are incorporated during treatment.

Helping an Amphetamine-Addicted Loved One

If you have a loved one who is struggling with amphetamine abuse, you're probably feeling overwhelmed and frustrated. Additionally, the problem could be getting worse, making things even harder for you and your family. Maybe even to the point that your family has to get help or terrifying consequences will ensue. And, without treating amphetamine abuse, it has the potential to cause multiple physical, psychological, and even emotional damage. Plus, it can even lead to life-long irreversible issues and even death itself. So, if addiction is evident, treatment is necessary. Otherwise, the battle with addiction won't end until life does.

Sadly, addiction doesn't just disappear. Your loved one desperately needs professional help to gain true, lasting sobriety. Unfortunately, without the help he or she needs, a loved one abusing amphetamines may never steer clear of the path that is an addiction. And, may become one of the dreaded fatality statistics if addiction is never addressed.

Unfortunately, it's commonly said that one must hit "rock-bottom" in order to be helped. Hence, a person has nowhere left to turn besides treatment. In turn, they are forced to get help and choose a lifestyle of recovery. Regrettably, the rock-bottom for many abusing substances like amphetamines means an overdose death. So, it's vital that your loved-one gets treatment before hitting this inevitable low brought on by an addictive lifestyle.
